PROFESSIONAL SUMMARY

Analytical, commercially minded Computer Science graduate and AWS Certified AI Practitioner who turns data into clear, actionable insight. Hands-on with SQL, Python (Pandas, NumPy), Excel and Tableau, and experienced in building dashboards, data pipelines and accuracy-focused reporting, from reconciling bank-statement data to analysing network and behavioural data to surface drivers and trends. Brings a data-integrity mindset, a client-first approach from stakeholder-facing work, and the ability to explain findings simply to technical and non-technical audiences.

EDUCATION & CERTIFICATIONS

BSc Computer Science – University of Cape Town

AWS Certified AI Practitioner – Amazon Web Services

Spring Boot Course – Udemy

NSC – Matric Certificate – Claremont High School

PROJECTS

Capstone – AI Content Detector *Group Project*

Python, Pandas, NumPy, ELECTRA (NLP), Google Colab

- Built a web application that classifies user-submitted text as AI-generated or human-written using an ELECTRA-based NLP model.
- Prepared datasets with Pandas and NumPy, built the Python data pipeline and helped train the model in Google Colab.
- Planned milestones and deliverables with a Gantt chart to meet deadlines.

Fitness Dashboard *Personal Project*

React, Recharts, Convex, Clerk, Groq API, Tailwind CSS | GitHub | Live demo

- Designed an analytics dashboard turning workout, nutrition and body-metric data into volume trends, a consistency heatmap, an athlete radar and macro breakdowns.
- Integrated an AI coach using RAG (Hugging Face embeddings, Convex vector search, Groq) to give advice based on each user's own data.

SA Simple Books *Personal Project*

SvelteKit, TypeScript, PostgreSQL, Drizzle, Clerk, Groq API, Docker | Live demo

- Built a parser that extracts transactions from PDF and CSV statements from six major SA banks, reconciling signs and running balances to ensure data accuracy.
- Implemented a double-entry ledger with reporting (trial balance, account ledgers, CSV export) and VAT-aware categorisation using rules first, then AI.

Social Network RAG *Personal Project*

Python, NetworkX, YAKE, fastembed, FastAPI, React | GitHub

- Analysed WhatsApp, Telegram and Slack chats as a network graph, using PageRank, betweenness centrality and community detection to surface key influencers, brokers and topics.
- Built the pipeline that normalises each export into one schema, with semantic search and an interactive visual interface.

Notes-CLI (Rust, Go): CLI that summarises text via the Groq API into Obsidian notes. GitHub

WORK EXPERIENCE

Web Developer – Boostbiz Consulting *2025–2026*

- Built and rebuilt responsive client websites in WordPress, tailored to each customer's preferences and requirements.
- Worked with supervisors and clients to turn design preferences into finished sites.

SKILLS

Data Analysis: SQL (PostgreSQL), Python (Pandas, NumPy), Excel, statistics
Visualisation: Tableau (basic), Recharts, dashboard design
Cloud & AI: AWS AI Practitioner, NLP, RAG, embeddings, vector search
Programming & Tools: Python, Java, TypeScript/JavaScript, Rust, Go, Git, Docker, Postman, Google Colab, WordPress

SA citizen | Driver's licence: Code B
